

The DataPulse AI Partnership: From Backlog to Bottom Line, Faster

The Joy of Creation

DataPulse AI

Great ideas are getting stuck...

Inaccessible Technology

The world of AI and advanced software is complex. You know the potential is there but harnessing it to solve your specific business problems feels out of reach without taking on substantial risk.

Slow Delivery

Your in-house teams are brilliant, but they're buried in "keep-the-lights-on" tasks. Your most innovative projects—the ones that drive real growth—are delayed for months, or even years.

High Cost & Risk

Building a specialized in-house AI team is incredibly expensive and time-consuming. Traditional outsourcing projects often run over budget and fail to deliver, leaving you with wasted resources and little to show for it.

Solution:

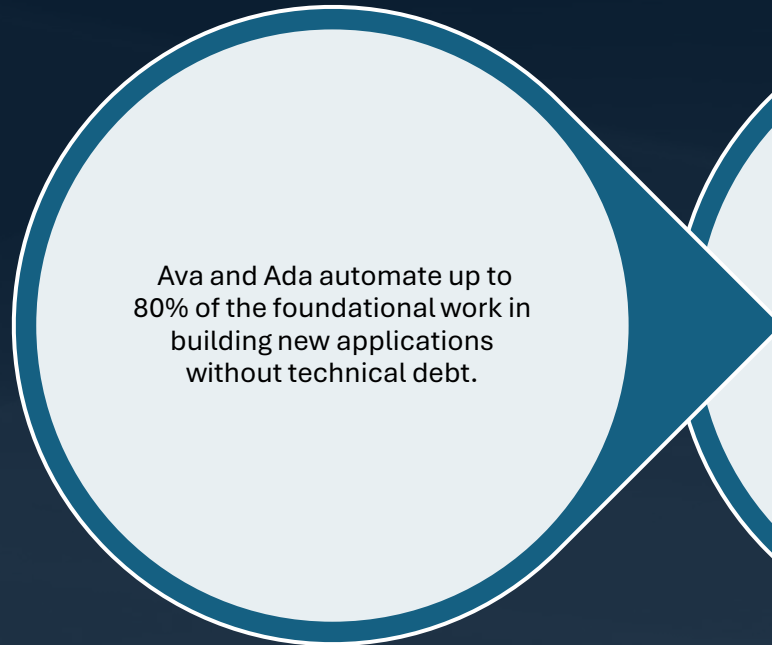

A New Model for innovation Delivery:

1. For a predictable monthly investment, you get access to a multi-disciplinary team of experts focused exclusively on your project
2. We handle everything from strategy and design to development, testing, and deployment, allowing you to focus on business value while we accelerate delivery

Power behind our Speed: Acceleration Engine

Ava & Ada

Human Expertise

Production ready

The Acceleration Engine is our secret source. It's the tangible, technological advantage that allows us to make a bold promise — and keep it.

A Predictable, High-Value Investment

Simple, Transparent Pricing

\$13,500p/m:

1. Dedicated, multi-disciplinary delivery team
2. AI & Machine Learning Expertise
3. Full-Stack Software Development
4. Strategic Design & Prototyping
5. Rigorous Quality Assurance
6. Project & Partnership Management
7. 100% IP & Source Code Ownership

The Smarter Investment: A Comparison

The Value Analysis: Total Cost of Delivery & Speed to Value

***Cost Assumptions in South African Rand (exchange rate 18.5):

Description	DataPulse AI Cost	***Est. Avg Outsourcing	***Avg. Internal Team Cost
Materials	\$3,500.00	\$10,702.70	N/A
Time	\$10,000.00	\$19,398.82	\$37,837.84
Fully Loaded Cost Multiplier	1	1.15	1.4
Totals	\$13,500.00 [R249,750.00]	\$36,121.82 [R668,253.70]	\$52,972.98 [R980,000.10]

- 1 Senior Manager at R100,000.00
- 1 Scrum Master at R45,000.00
- 1 Business Architect at R75,000.00
- 1 Systems Architect at R75,000.00
- 1 Designer at R45,000.00
- 1 Data engineer at R70,000.00
- 3 Developers at R65,000.00 each
- 2 Testers at R45,000.00 each
- + north of R3,000.00 per month of subscriptions and software to enable the team
- Brief: Relatively low complexity end-to-end build with 5 front end pages, back-end code, database structure, requirements documentation and other SDK artifacts.
- Time taken to complete with above assumptions on avg: 4 months
- Fully trained and refined models and retention processes will take longer than the development of the core software components.

If an application can generate \$50k/month in new revenue, a 4-month delay with an internal team represents a \$200k opportunity cost. Our model is designed to capture that value for you, faster.

Proof, Not Promises: Our Track Record

+12 years experience working with startups, private companies, enterprises and public companies

Health Scanning Application	Rebuilding of mobile health scanning application into a web-based application featuring face, body, finger, and other health scanning technologies to provide non-invasive diagnosis.
GenAI Claims Agent and Rules Engine	Design, build, and implementation of multi-lingual GenAI claims agents and rules engine to process claims and unclaimed benefits. The agents integrate to Salesforce and automatically process claims while creating tickets in Salesforce. All interactions between AI agents and clients is recorded, transcribed and translated with all claims information.
Segmentation modeling	Segmentation modeling to better understand insurance client segments.
Propensity and prediction to pay model	Design, development, and implementation of a model that predicts with an 80% accuracy which clients would not pay their first premium. With this information we designed new retention processes, increasing first premium collection by 7% in the first month of testing.
Social media targeting model	Design and implementation of a digital marketing model to inform and push market access. Model informed ring-fenced digital marketing campaigns and strategies and led to the conversion of 58% of most valuable clients across digital channels.
Payment recovering chat bots	Redesign, implementation, and refinement of a payment management and recovery chatbot for a payment gateway provider. The bot managed multiple tasks surrounding payments and services.
Q&A bots	Design, development, and implementation of question-and-answer bots for insurance provision and servicing and were deployed across several digital channels.
Education Platform	Design, develop, and implementation of a finance and investment education platform. The platform includes several learning spaces and mediums and includes several value-adds to provide both education and information to the public.
